## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 to 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Usui et al (2005/0029507).

The Usui et al reference teaches a method and product of a gallium nitride based compound on a metal, note entire reference. On a substrate, a first layer of gallium nitride is deposited. On that layer a metal layer is deposited, which can be titanium or vanadium, note page 3. Then the structure is heated treated to create voids in the metal layer and pits in the gallium nitride layers, note figures. Then a second compound of gallium nitride is deposited filling the pits and voids and then growing a layer on top of the metal, note examples. The gallium nitride thickness can be 400nm. The sole difference between the instant claims and the prior art is the oxygen content. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable atmosphere of processing in the Usui et al reference in order to prevent oxide formations.
